

# Microsoft 365 Health Check

Benchmarking your Microsoft 365 Environment

## Actionable insights

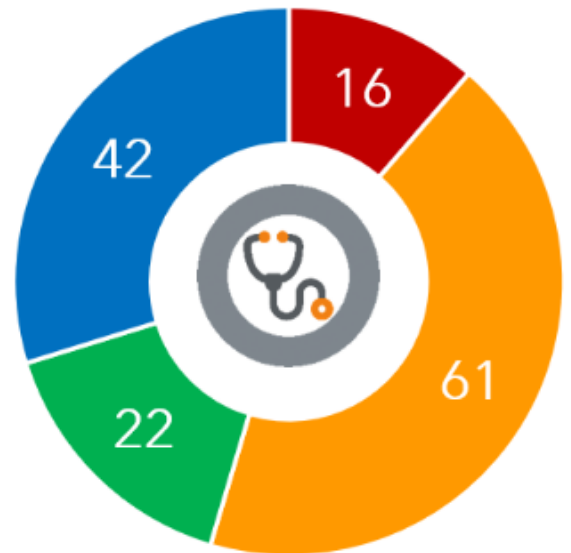

Our 140+ point Microsoft 365 Health Check will ensure your Microsoft 365 configuration meets the necessary performance and security standards and provide you with a detailed, actionable, and comprehensive analysis.

The HybrIT Microsoft 365 Health Check is meticulously designed to ensure your Microsoft 365 configuration not only meets, but also exceeds the necessary performance and security standards. Our in-depth review covers a wide array of essential components, including the Microsoft 365 Admin Center, Microsoft 365 Defender, Microsoft Purview, Microsoft Intune, Microsoft Entra ID (formerly Azure Active Directory), Exchange Online, SharePoint Online, OneDrive for Business, Microsoft Teams, and Microsoft Fabric.

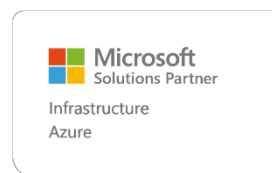

### Features

140+ health check items will be analysed from the following technology areas:

- Microsoft 365 Admin Center
- Microsoft 365 Defender
- Microsoft Purview
- Microsoft Intune
- Microsoft Entra ID
- Exchange Online
- SharePoint Online
- OneDrive for Business
- Microsoft Teams
- Microsoft Fabric
- Cost Optimisation

- Critical issue
- Medium issue
- Aligned to recommendation
- Not applicable / Non-health recommendation

Benchmarking your Microsoft 365 Environment

## What's Included

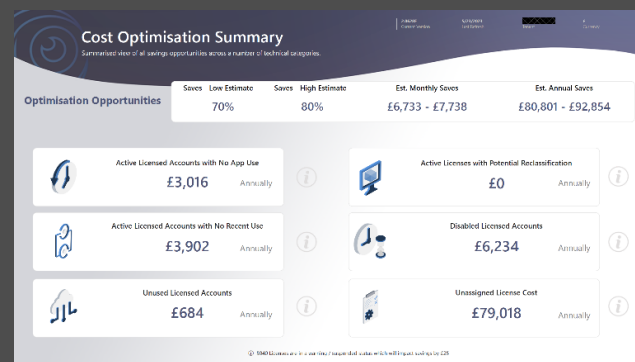

Our assessment benchmarks against the Center for Internet Security (CIS) Microsoft 365 Foundation Baselines Levels 1 and 2, plus a variety of additional checks and measures that bolster your Microsoft 365 tenancy's security and productivity. Many of the steps we take in our health check are universal, providing benefits that transcend the specific CIS guidelines and contribute positively towards meeting various other benchmarking standards.

Our comprehensive Health Check includes a technical assessment and cost optimisation report, providing you with a detailed, actionable, and comprehensive analysis.

### Cost Optimisation Report

This analyses your current licensing, usage and accounts.

### Health Check

A review of your organisations M365 Configuration:

- **RAG Status:** Summarising any identified issues.
- **Detailed Usage Report:** Highlighting current consumption and storage.
- **Detailed Analysis:** Technical detail behind the recommendations.
- **Secure Score Recommendations:** Recommendations to improve secure score.
- **Device and Identity Management:** Includes device and identity policy recommendations.
