

# Microsoft Azure

## Readiness Assessment

## Cloud Adoption Framework

The Cloud Adoption Framework provides tools and guidance for implementing not only cloud technologies, but also business, people, and process changes, to adopt Azure with confidence and control.

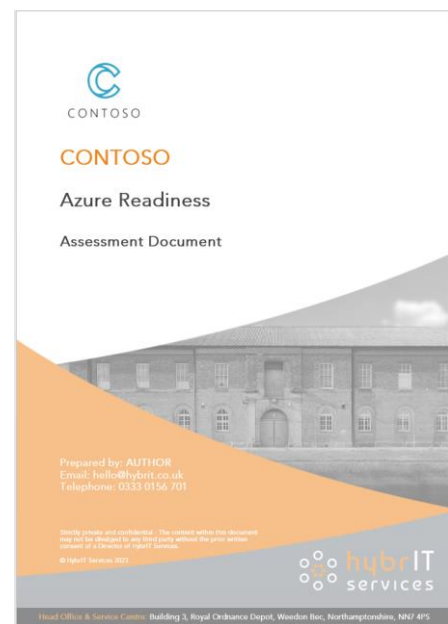

The Microsoft Cloud Adoption Framework for Azure is a full lifecycle framework which enables organisations to achieve their goals through best practices, documentation, and tools to help create and implement business technology strategies for the cloud. This Azure Readiness Assessment aligns to the Cloud Adoption Framework and is intended for business that are interested in migrating to or utilising Azure. It helps organisations evaluate their current IT infrastructure, applications, and processes to determine its readiness for migrating to Azure.

### Assessment Areas:

- ❖ **Infrastructure Evaluation:** Analysing the existing on-premises or data centre infrastructure to assess its compatibility with the cloud environment.
- ❖ **Application Analysis:** Assessing the organization's applications to identify which ones are suitable for migration to Azure.
- ❖ **Security and Compliance Review:** Evaluating the security controls and compliance requirements of the organisation to ensure they align with Azure's security and compliance standards.
- ❖ **Cost Analysis:** Estimating the potential cost of running applications and services in the Azure.
- ❖ **Performance Assessment:** Understanding the performance requirements of workloads.
- ❖ **Migration Strategy:** Formulating a comprehensive migration strategy that outlines the necessary steps, timelines, and resources required for a successful migration to Azure.
- ❖ **Training and Skill Gaps:** Identifying any training needs or skill gaps within the IT team.

### Prepare for cloud adoption by aligning to the Cloud Adoption Framework

Our assessment will provide you the confidence required to make your journey into Azure possible.

## Assessment Report

This assessment is intended for use by organisations that are considering the adoption of Microsoft Azure cloud services. This report would be of particular interest to IT professionals and decision makers who are responsible for evaluating and implementing cloud computing solutions within their organisation.

The output is intended for all levels of an organisation, from IT Administrators to CxO level. All business stakeholders are included in initial discussions and workshops around cloud adoption, to ensure all motivations and success criteria are defined at the early stages and expectations are met.

## Charges

- ❖ 0-50 Servers = £x,xxx
- ❖ 51-100 Servers = £x,xxx
- ❖ 101-200 Servers = £x,xxx
- ❖ 200 – 300 Servers = £x,xxx
- ❖ 300 - > Servers = POA

## Optional Services

### Azure Migrate Assessment

- ❖ Receive an end-to-end analysis and mapping of your entire IT infrastructure considering business goals, current deployment, usage, processes, and data.
- ❖ Evaluate your overall infrastructure in relation to your on-premises and Microsoft Azure cloud strategy.
- ❖ Identify migration opportunities and best practices for deployment in Windows Server and SQL environments.

### Azure Virtual Desktop Assessment & POC

- ❖ Provision of proof-of-concept Azure Landing Zone.
- ❖ Establish connectivity to your on-premises environment (supported Firewall device required).
- ❖ Single Azure Virtual Desktop image/build with M365 apps and up to 3 Line of Business applications.
- ❖ Deployment of a Single Host Pool for up to 20 users.
